INTRODUCTION TO HTML & CSS

HKBU CODING CLUB

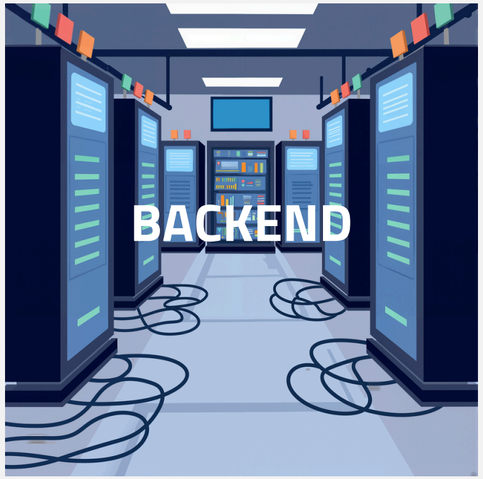

WHAT IS WEB DEVELOPMENT?

Web development is the process of creating and maintaining websites and web applications, involving designing the look, writing code for functionality (using languages like HTML, CSS, JavaScript).

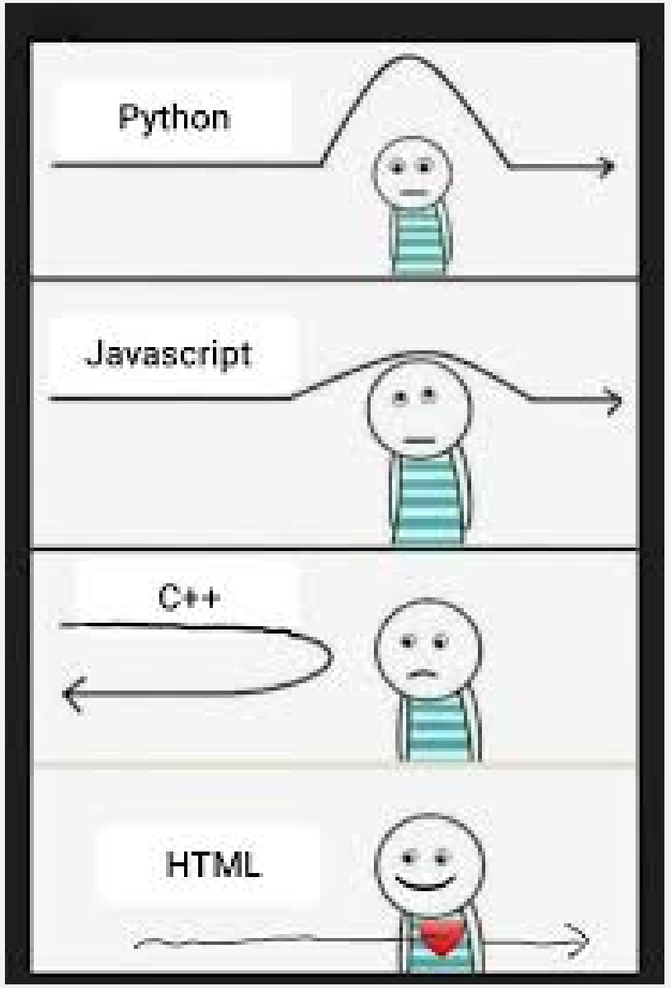

HTML

HYPER TEXT MARKUP LANGUAGE

HTML is not a programming language; instead, it is a markup language that uses tags to define elements within a document.

Every piece of content on a web page - be it text, images, videos, or forms - is placed using HTML.

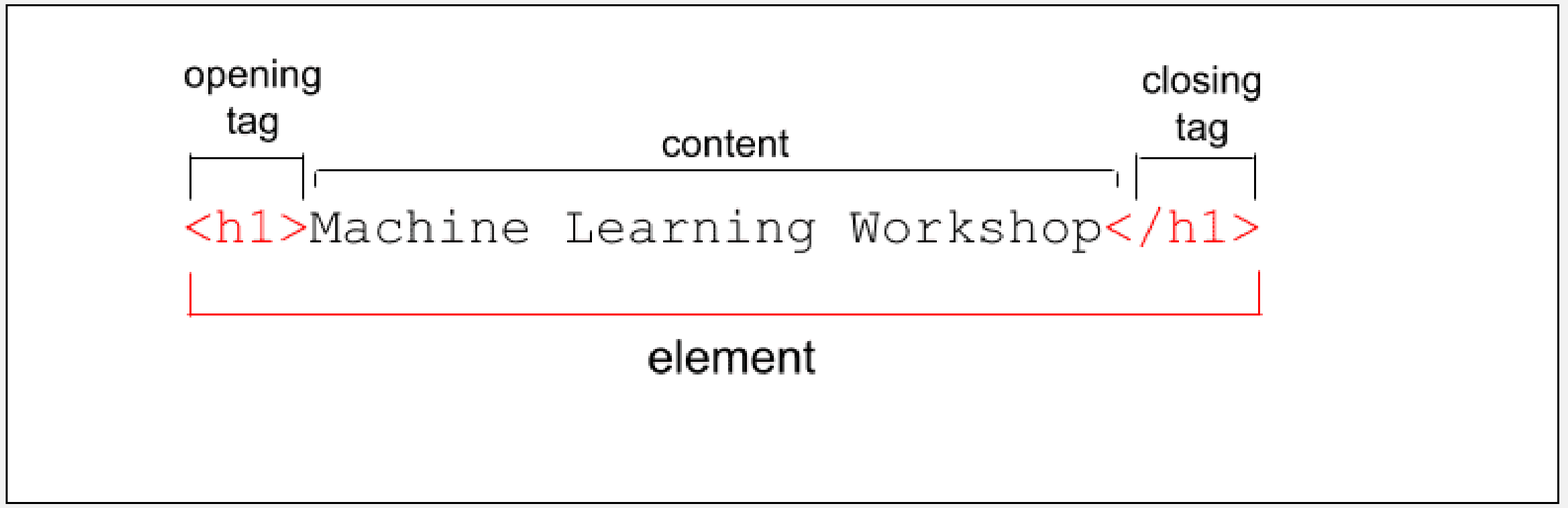

WHERE TO CODE IT?

https://code.visualstudio.com

Just Search Vscode on the computers here!

HOW TO CODE IT?

USES TAGS → Define Elements(Heading, Button,Image,etc) in Webpage

TAGS

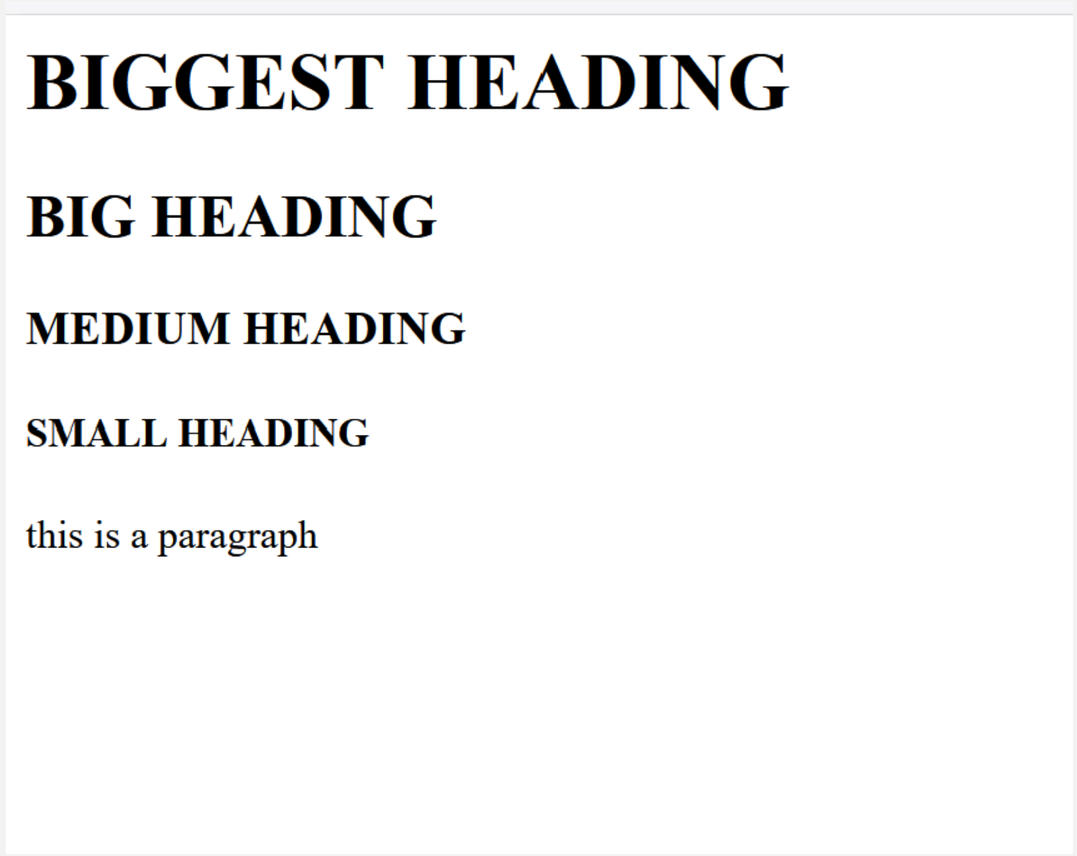

Heading Tags	<h1>, <h2>, <h3>, <h4>, <h5>, and <h6>
Paragraph Tag	<p>
Line Break Tag	 or
Center Tag	
Horizontal Rule Tag	<hr> or <hr />
Preserve Formatting Tag	<pre>
Non-breaking Space	
Listing Tags	and • Unordered Listing: • Ordered Listing: • List Item:

HTML Basic Tags

HEADING & PARAGRAPHS

Let’s code this together

EXTENSIONS: LIVE SERVER & AUTO SAVE

LISTS

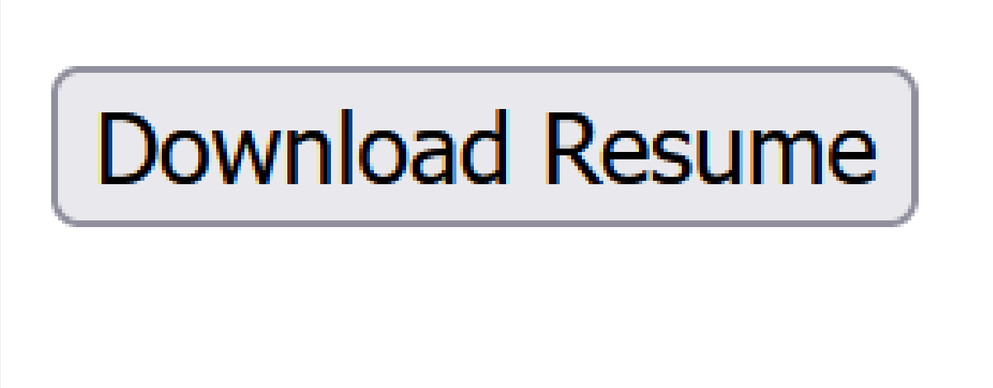

ORDERED LIST

1. Enginner
2. Writer
3. Philosopher

UNORDERED LIST

- Biryani
- Biryani
- Biryani

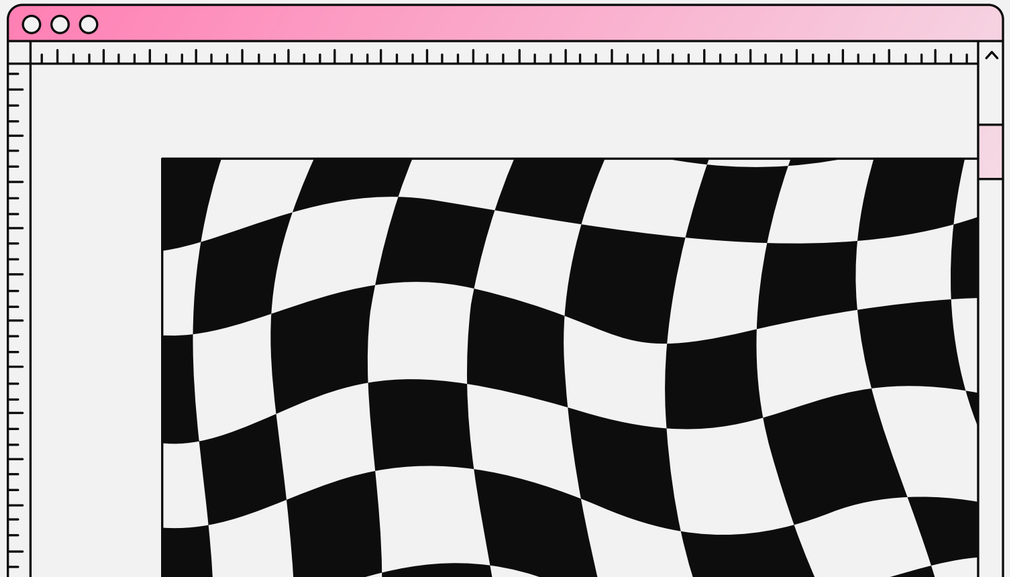

BUTTON

DIV

The tag is used for grouping the HTML elements into sections on a webpage.

Work with me.

Let’s Add Some Color

CSS

CSS stands for Cascading Style Sheets. Using CSS, you can style your HTML webpage to make it colorful, structured, modern, and responsive. All modern websites use CSS for styling their web pages.

CSS

Thanks to CSS we can control all the aspects of the visualization and some other features:

- **Colors: content, background, borders**
- **Margins: interior margin, exterior margin**
- **Position: where to put it**
- **Sizes: width, height**
- **Behaviour: changes on mouse over**

CSS

Thanks to CSS we can control all the aspects of the visualization and some other features:

- **Colors: content, background, borders**
- **Margins: interior margin, exterior margin**
- **Position: where to put it**
- **Sizes: width, height**
- **Behaviour: changes on mouse over**

CSS

CSS example

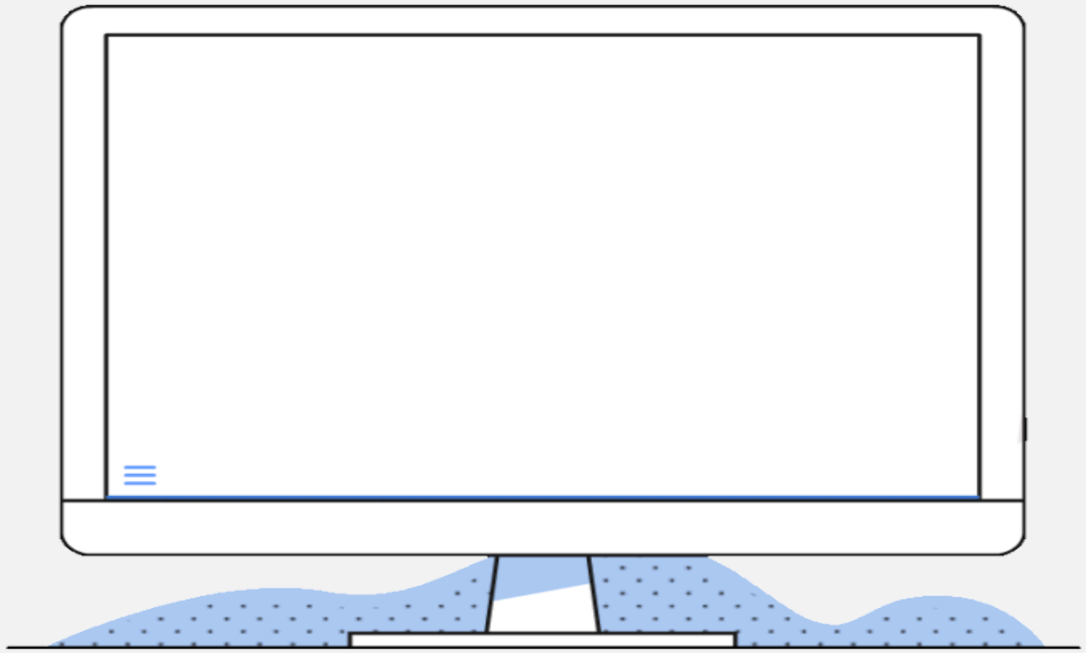

```
* {
    color: blue; /*a comment */
    margin: 10px;
    font: 14px Tahoma;
}
```

This will change all the tags in my web ('*' means all) to look blue with font Tahoma with 14px, and leaving a margin of 10px around.

Ways to insert CSS

There are 3 ways to insert CSS:

- Internal: The internal style is defined inside the <style> element, inside the head section.
- External: Can be written in any text editor and must be saved with a .css extension. The external .css file should not contain any HTML tags.
- Inline: Add the style attribute to the element. The style attribute can contain any CSS property.

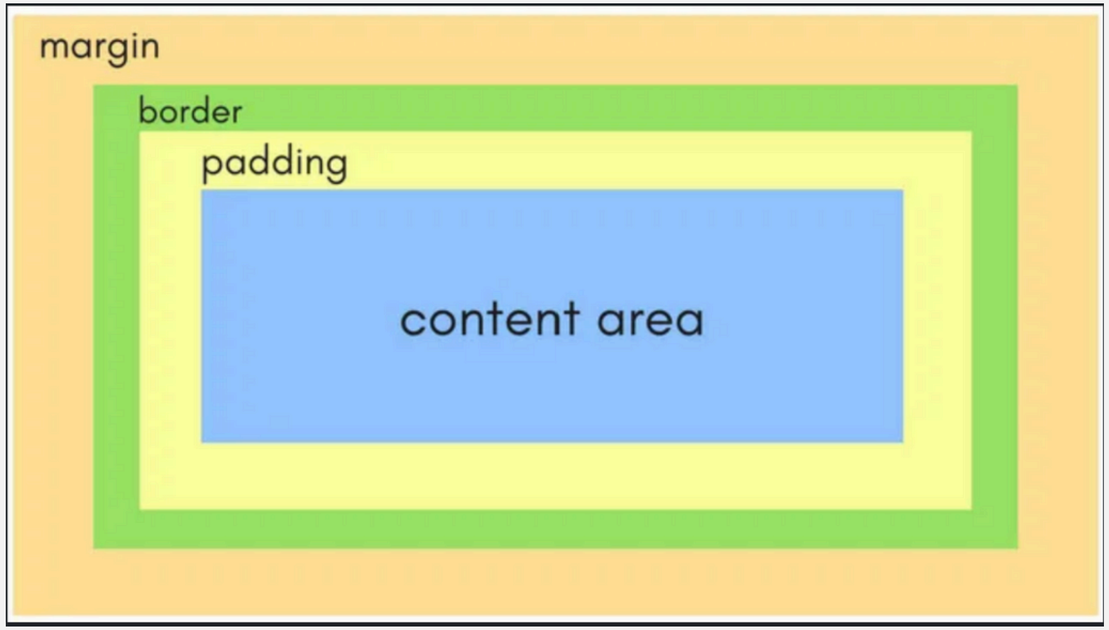

CSS fields

Here is a list of the most common CSS fields and an example:

```
color: #FF0000;    red;    rgba(255,00,100,1.0); //different ways to specify colors
background-color: red;
background-image: url('file.png');
font: 18px 'Tahoma';
border: 2px solid black;
border-top: 2px solid red;
border-radius: 2px; //to remove corners and make them more round
margin: 10px; //distance from the border to the outer elements
padding: 2px; //distance from the border to the inner elements
width: 100%;    300px;    1.3em;  //many different ways to specify distances
height: 200px;
text-align: center;
box-shadow: 3px 3px 5px black;
cursor: pointer;
display: inline-block;
overflow: hidden;
```

CSS FLEX BOX

Each and every element created using any HTML tag, is a box. The CSS box model, shows the margin, border, padding and actual space for content as different spaces, which together forms any element. Give ability to justify and distribute space.
