# HTML

HYPER TEXT MARKUP LANGUAGE

HTML is not a programming language; instead, it is a markup language that uses tags to define elements within a document.

Every piece of content on a web page - be it text, images, videos, or forms - is placed using HTML.

# WHERE TO CODE IT?

https://code.visualstudio.com

Just Search Vscode on the computers here!

# TAGS

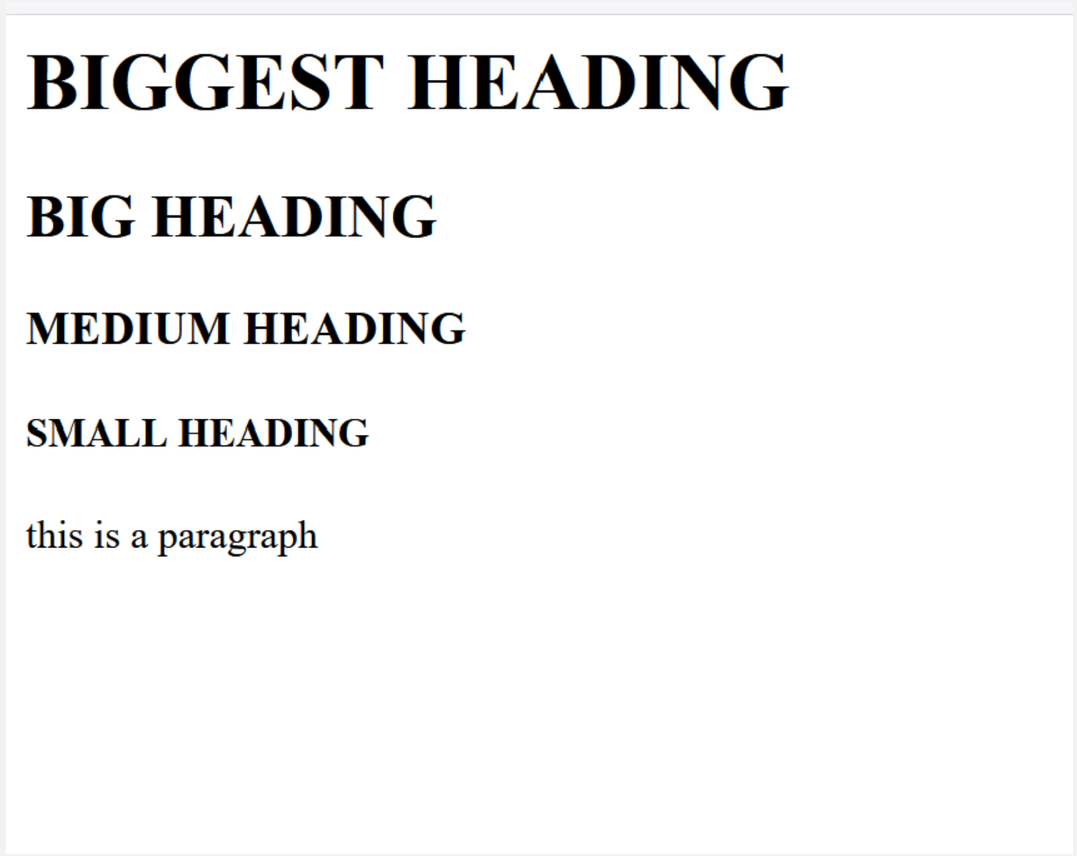

| | |
|---|---|
| Heading Tags | <h1>, <h2>, <h3>, <h4>, <h5>, and <h6> |
| Paragraph Tag | <p> |
| Line Break Tag | <br> or <br /> |
| Center Tag |  |
| Horizontal Rule Tag | <hr> or <hr /> |
| Preserve Formatting Tag | <pre> |
| Non-breaking Space |   |
| Listing Tags | <ul> and </ul><br>• Unordered Listing: <ul><br>• Ordered Listing: <ol><br>• List Item: <li> |

**HTML Basic Tags**

# HEADING & PARAGRAPHS

Let’s code this together

EXTENSIONS: LIVE SERVER & AUTO SAVE

# LISTS

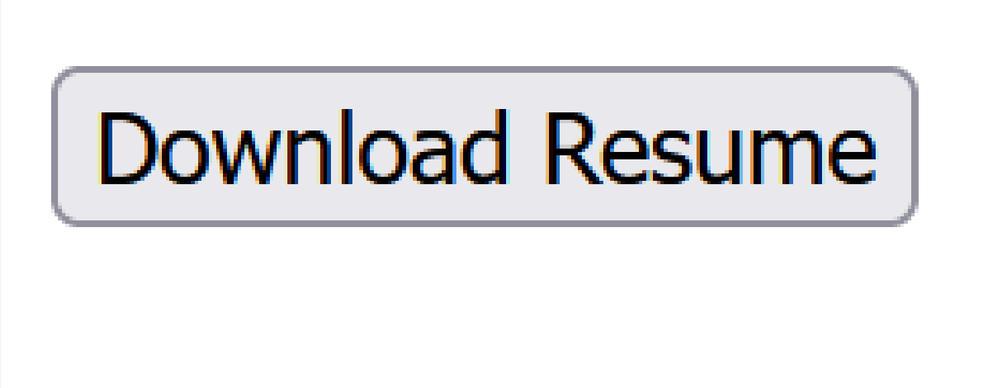

## ORDERED LIST

1. Enginner

- Biryani

# BUTTON

# DIV

The  tag is used for grouping the HTML elements into sections on a webpage.

# BOOTSTRAP

Bootstrap is a popular front-end framework that helps you build clean, responsive websites faster.

- It gives you ready-made design pieces (buttons, forms, navbars, cards, grids).
- Your website automatically adjusts to mobile, tablet, and desktop screens.
- You write less CSS and focus more on layout and content.

Check here: https://getbootstrap.com/

# INSTALL VIA CDN

Copy From here:
https://getbootstrap.com/

**COPY THIS TO END OF HEAD**

<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/css/bootstrap.min.css" rel="stylesheet">

**COPY THIS TO END OF BODY**

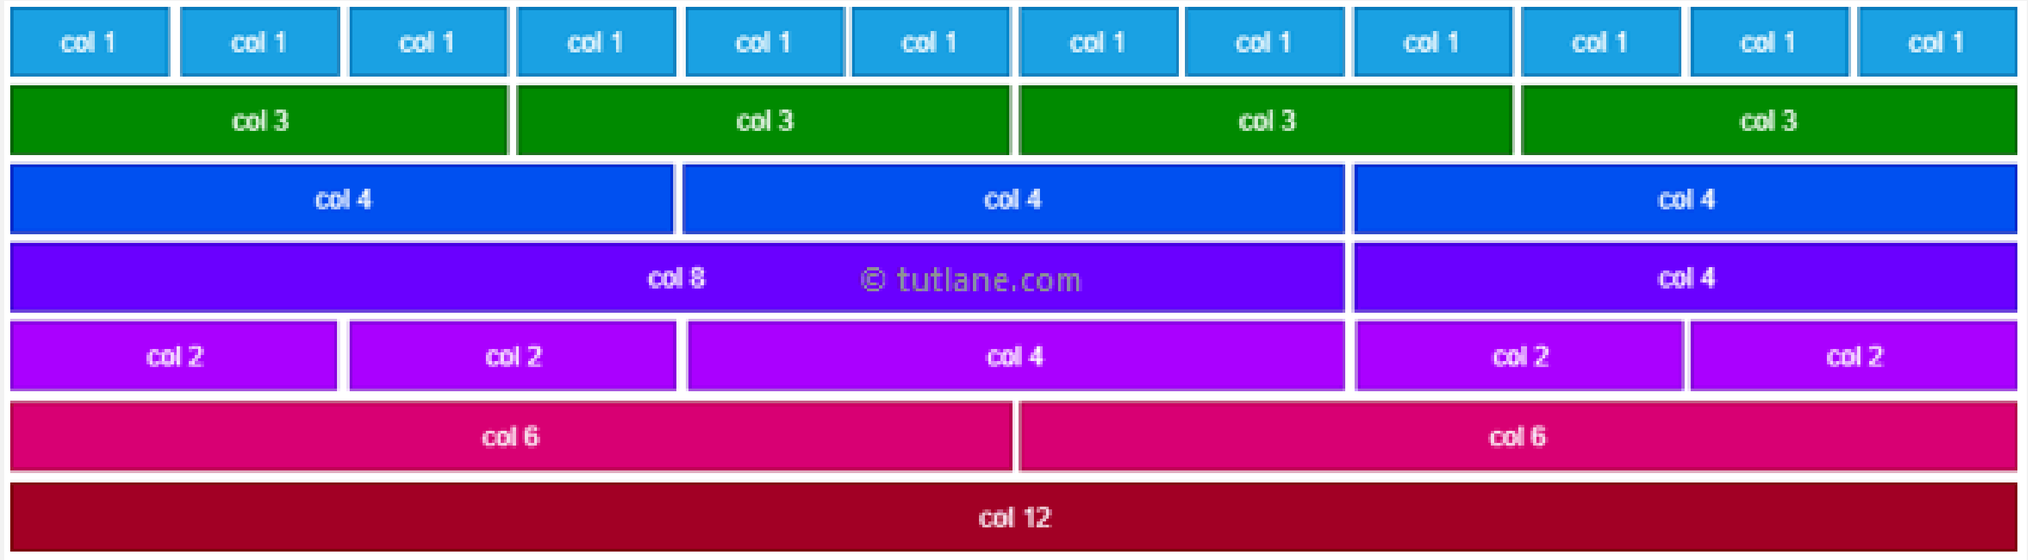

<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/js/bootstrap.bundle.min.js"></script>

<link rel="stylesheet" href="https://cdn.jsdelivr.net/npm/bootstrap-icons@1.11.3/font/bootstrap-icons.css">

# BOOTSTRAP GRID SYSTEM

- Bootstrap provides CSS classes that define the layout and behavior of columns within the grid system.
- These classes then can assigned to HTML elements to specify how they should behave at various screen sizes.
- The most commonly used grid classes are col-xs-*, col-sm-*, col-md-*, and col-lg-*, where * represents the number of columns an element should span.

# BOOTSTRAP GRID SYSTEM

# BOOTSTRAP GRID SYSTEM

- The page is divided into 12 columns
- You place content inside columns
- Columns resize, stack, or move automatically based on screen size

Container → holds everything

Row → horizontal group

Columns → actual content (col-)

# SOME EXAMPLE ON HOW YOU USE BOOTSRAP

# Work with me!

New Tab

**BASE PROMPT:**

I have an HTML webpage that I want to visually enhance and beautify. Please analyze the HTML code I provide and improve its visual design, layout, and styling while keeping all existing functionality the same. Do not add, remove, or modify any functionality, JavaScript behavior, interactive elements, or backend logic.

New Tab

**OTHER ELEMENTS:**

1. Color Palette: Implement a clean, professional, and light color scheme. Use shades of blue
2. Use a clean, modern font stack -Use serif fonts
3. Implement a highly easy and intuitive user interface. Make the page easy to scan.
4. Use generous padding and margins
